### DETAILED ACTION

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 8,11-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Soprano (US 5,297,136 cited previously) in view of Mohindra (US 6,678,312).

#### **Claims 8 and 11.**

Soprano discloses a method for receiving a multi-carrier comprising, see Fig.1,  
separating the received signal into a plurality of frequency bands by a plurality of bandpass filters (11) ,

converting the analog signal in each band into a digital signal in a plurality of analog-digital converters (12).

Soprano fails to teach “activating and deactivating each analog-digital converter depending on the presence of a signal in the associated band.”

Mohindra teaches detecting the presence of a signal, and activating or deactivating A/D converters (524, 526) depending on the presence of a signal in order to reduce power consumption. See col. 2, lines 16-19 and col. 5, lines 55- 59.

Thus, it would have been obvious to one skilled in the art at the time the invention was made to provide a device to detect the presence of a signal in each band in the apparatus of Soprano such that the A/D converters (12) would be activated or deactivated depending on the presence of a signal in order to reduce power consumption, as taught by Mohindra.

Art Unit: 2638

Claims 12 and 13.

Soprano et al shows the processing of the digital signals separately. See Multicarrier demodulator 20.

Claims 14 and 15.

Soprano et al in view of Mohindra teaches an automatic means to control the A/D converters. However, lacking criticality, manual control would have been a matter of design choice.
